

Cognitive Interventions for Adults with Acquired Brain Injury

Prerequisite: Neurobehavioural Rehabilitation: Assisting Recovery & Function in Everyday Life Following Brain Injury (Level 1)

May 31-June 1, 2018

Recent advances in the medical treatment of individuals who sustain traumatic brain injury have resulted in greatly increased survival. The long-term quality of life for these individuals and their potential for functional independence and community integration, often depends on the degree of residual problems with cognitive function and their capacity for emotional and behavioural self-regulation.

This course will fill the gaps between the how to's of cognitive rehabilitation and the hands on information and skills needed when working with people with brain injury. Some topics include:

**Assessment
Memory Retraining**

**Goal Setting
Treatment Planning**
